Welcome to CEES

It is now more than 20 years since our Company began its services in commercial aircraft engine Maintenance Repair and Overhaul (MRO).

Central European Engine Services Sp. z o.o. (CEES) is a reputable company providing specialized and competitively-priced services for commercial aviation in the global aviation industry market in accordance with EASA/FAA/CAA quality standards.

CEES mission is to support commercial aircraft operators in keeping their fleet flying safely.

Throughout the years of **CEES** operations, it has enhanced its maintenance capabilities by new engine types and maintenance scopes. The scope of the approval was gradually extended by CF6-80C2, CF34-8E, CF34-10E, CFM56-3/7B, LEAP-1B engines and we are working hard to expand our capabilities to other engine types.

Focusing on the needs and expectations of our Customers while at the same time offering our in-depth experience and expertise, we are capable of providing support and maintenance at locations required by our Customers in different parts of the world, including both Americas, Europe, Middle and Far East and many other locations across the globe.

Our business partners greatly value the work of our entire team.

Our immediate response to their needs paired with an accommodating and flexible approach gives them the assurance of order execution at the highest possible level and without any delay.

This translates into indisputable trust, confidence and safety, which are the highest values in the aviation industry.

The key factors of our success and the position on the MRO market are:

- Convenient central European location, allowing for quick transport of engines, modules and components;
- Short turnaround times (TAT) focused on Customer needs;
- Immediate and effective response to the Customer's service needs;
- Experienced and thoroughly trained staff guaranteeing delivery of the highest quality services;
- Borescope inspections of all engine types in the scope of approval ;
- Comprehensive engineering support covering engines in operation and off-wing maintenance management.
